Application/Control Number: 09/963,766

Art Unit: 1646

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-7, 28 drawn to GPCR polypeptides, classified in class 530, subclass 350.
- II. Claims 8-15, 17-24, 26 drawn to nucleic acids, vectors, host cells and a method of use to make polypeptide, classified in class 536, subclass 23.5.
- III. Claim 16 and 25, drawn to an antibody, classified in class 530, subclass 387.1.
- IV. Claim 27, drawn to a method of identifying a compound that modulates aGPCR, classified in class 435, subclass 7.2.
- Claims 29 and 30, drawn to a compound that modulates a GPCR,
 classified in class 514, subclass 2.

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to entirely different products each product being structurally and functionally different, being composed of different building blocks and having entirely different functions, not being of use together or interchangeably. The products of Group I are proteins, made up of amino acids while the products of Group II are nucleic acids, made up of nucleotides and useful to encode proteins or detect other nucleic acids, a function which the proteins of Group I do not share. The products of Group III are antibodies which may be used to detect the proteins of Group I, again a function not shared by the products of either Group I or

Application/Control Number: 09/963,766

Art Unit: 1646

Group II. The antibodies of Group III also have a unique structure which is not shared by the receptor of Group I.

Inventions I and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the polypeptides of Group I may be used to raise antibodies.

Inventions IV and V are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the compounds of Group V may be made in a materially different manner. Indeed, the method of Group IV is not actually a method of making the compounds of Group V, but rather it is a method that is useful in screening compounds and is not required for the manufacture of the products themselves.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1646

Because these inventions are distinct for the reasons given above and the search required for any single Group is not required for any other Group, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pak Michael whose telephone number is 703-305-7038. The examiner can normally be reached on 1030-800.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eyler Yvonne can be reached on 703-308-6564. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 308-0196.
